

Bindery Management System

The FASTnet Bindery Management System (BMS) is a new generation, state of the art Windows 2000™ based supervisory system. It is designed to load, manage and manipulate a large number of subscriber data files and tapes. It is a client/server based solution designed to simplify the management of the large amounts of data and files associated with a bindery. This product connects to a variety of inkjet controllers from FASTech, Domino, Heidelberg, Videojet and others by way of Ethernet. Its dual workstation configuration is designed to provide maximum utilisation in even the most demanding bindery. Its hot backup dual servers are designed with maximum data integrity in mind to provide for a highly reliable data storage system.

FASTnet – Features and Benefits

- Connects to a variety of bindery inkjet controllers from FASTech, Domino, Heidelberg, Videojet, and others. Reporting features vary per controller type
- Divides files into smaller files for separating data among machines, job runs, zones, etc.
- Verifies data files for compatibility with the designated tape specification

FASTnet

- Organizes files into folders by customer, job and by machine
- Creates reports per data files, per job or for all files loaded on system
- View any record in a file for accuracy and print out record data on any windows compatible printer
- Connects to an existing plant Ethernet network or can be established with a stand-alone ethernet network
- Dual workstations for simultaneous operation to maximise operator utilisation in high volume binderies
- Dual servers for hot backup of data, maximizing data store integrity
- Compatible with industry standard data formats: SE-125/163, VIP-II/IV, fixed field and others
- Modify hopper mappings within data files (if using appropriate data formats) or imported from a text file
- Prepare hopper mapping dummy tapes for pre-loaded setup information at machines
- Standard messages can be reviewed, modified, spell checked and printed
- Additional Reports include record layout, file layout and load history
- Read or Write data to 9-track tapes, CD's, ZIP disks or other PC-compatible media

Technical Specifications

Workstations and Servers

Hardware:

- Rack mount industrial enclosure with cooling louvers on casters with 36" retractable work tables
- 2 Workstations
- 2 Servers
- 2 Keyboards & Flat Panel Screens on Pullout Shelves
- 2 Full size quad density 9-track tape drives on pull out shelves
- 2 Deluxe office chairs
- Uninterruptible Power Supply (UPS)
- Dimensions: 96" wide (extended) or 32" wide (contracted) x 88" high x 32" deep

Windows 2000 and Windows Server are registered Trademarks of the Microsoft Corporation
